

Reg Cameras/ Licence plate recognition

Automatic number plate recognition cameras otherwise known as ANPR cameras can recognise number plates from vehicles travelling at a speed up to 45KM per hour.

The recognition software will work in both day light and night time.

In low light conditions the built in L.E.D.'s illuminate the number plate without obstructing the drivers' vision.

Our cameras can also detect number plates in bright lighting conditions e.g. strong sunlight or vehicle headlights.

These features make ANPR cameras perfect for use in applications such as residential estates, car parks, filling/Petrol stations plus any area with high volumes of vehicles passing through.
